## Extremely cost-effective

The high-frequency screen that we made is the same and even have better quality of American Drake high-frequency screen, 100% compatible with the industrial standard and its price is only half of that in America.

ISO9001

## Polyurethane sieve plate and modular sieve plate - Customization of sieve plate keep developing

### Polyurethane sieve plate:

The characteristic is that it is easier to replace. The large sieve plate is divided into several small pieces, with a built-in steel frame to ensure durability and facilitate replacement and maintenance. If one of the pieces is severely worn, it can be replaced immediately, saving costs. The bolt installation method is used.

These customized products can be precisely adapted to the screening requirements in a variety of complex working conditions, both reducing the installation cost and shortening the installation time. That is why modular screening panels are favored by modern mining enterprises of a certain size worldwide, and have become a popular choice in the industry, injecting new vitality into the screening link in industrial production.
